## LIVE PROJECTS

### • 2Fist – Online Gaming & Betting Platform

Developed an online gaming platform for user-to-user betting on competitive matches with live streaming. Key features include:

- Betting System: Users place bets against each other on live matches.
- Coordinator Management: Oversees game scheduling, team creation, and result updates.
- Live Streaming: Enables real-time match viewing while betting.
- User Dashboard: Manages profiles, payments, withdrawals, and match history.
- Secure Payment System: Supports deposits, withdrawals, and transaction tracking.

### • AmbuReady – Ambulance Service Platform

Developed an on-demand ambulance booking platform with user and driver panels for efficient service management. Key features include:

- User Panel: Sign-up/login, profile management, ambulance booking by category, live tracking, and booking/payment history.
- Driver Panel: Accept/reject bookings, update profile, and share real-time location.
- Booking System: Location-based ambulance booking with real-time notifications.
- Payment Integration: Secure payment processing for seamless transactions.

### • Urban Home – Service-Based Web Platform

Developed a service-based platform connecting users with professionals across various categories. Key features include:

- User Panel: Sign-up/login, profile management, subscription-based access, service details, payment history, and live location tracking.
- Vendor Panel: Categorized service listings, service management, and availability control.
- Admin Panel: Full control over users, vendors, services, subscriptions, and payments.
- Payment Integration: Secure payment processing for subscriptions and transactions.

- **Task Management System**

Developed a task management system with intuitive features for seamless workflow organization. Key features include:

- Task Management: Add, edit, assign tasks, and set calendar dates.
- Calendar View: Tasks are displayed on a calendar for better visibility.
- Drag & Drop: Easily move tasks within the calendar for quick rescheduling.

- **Moto Pay – Admin Panel for Payment Management**

Developed an admin panel for Moto Pay, a payment management system enabling vendor-to-vendor and vendor-to-user transactions. Key features include:

- User & Vendor Management: Add, edit, activate/deactivate, and delete accounts.
- Payment Handling: Track, approve, and manage transactions with detailed history.
- Notification System: Push notifications and notification history for updates.
- Product Management: Add, update, and delete products within the system.
